

CER Data and Code Availability Statement & Checklist

Manuscript Information

- **Corresponding Author:** _____
- **Manuscript Title:** _____
- **Manuscript ID:** _____

Part 1: Data and Code Availability Form

1. Research Content Type

Does this submission contain empirical work, simulations, or experimental work?

- ☐ **Yes** (Please complete the rest of this form)
- ☐ **No** (Sign and submit this form only)

2. Policy Compliance & Repository

- ☐ I have read the [CER Data and Code Availability Policy](#) and confirm adherence to all requirements.
- ☐ All data sources are properly cited and referenced in the manuscript per [AEA guidance](#).
- ☐ **Repository Information:**
 - ☐ **CER Dataverse:**
<https://dataverse.harvard.edu/dataverse/cer> (Project No: _____)
 - ☐ **Other Trusted Repository:**
(DOI: <https://doi.org/>_____)

3. Technical Specifications

- **Primary Software & Version:** (e.g., Stata 17, R 4.2.1) _____
- **Estimated Run Time:** (e.g., 2 hours) _____

4. Data Access Restrictions (Select ONE Option)

- ☐ **Option 0: No restricted data.** All data is included in the public replication package.
- ☐ **Option 1: Tier-1 Restricted.** Raw data is restricted; **Anonymized/Intermediate data** is provided for public replication.
- ☐ **Option 2: Tier-2 Restricted.** Data is restricted; **Private access** is provided to the Data Editor for internal verification.
 - *Access Method:* ☐ Remote Desktop ☐ Private Share ☐ In-person ☐ Other:

- ☐ **Option 3: Tier-3 Restricted.** Data is strictly confidential; **No verification** possible. (Must have been disclosed in the Cover Letter at initial submission).

Part 2: Replication Package Final Checklist

Please select each item and verify carefully. Incomplete packages will be returned for correction, delaying publication.

A. Documentation

- ☐ **README Template:** Follows the [Social Science Data Editors Template].
- ☐ **Mapping:** README clearly maps which script produces which Table, Figure, and In-text number.
- ☐ **Data Citations:** README lists all data sources with full bibliographic citations.

B. Code & Execution

- ☐ **Master Script:** A single script (e.g., `_main.do` or `run_all.R`) executes all programs in the correct order.
- ☐ **Relative Paths:** All file paths are relative. **No absolute paths** (e.g., `C:/Users/Author/...`) are used.
- ☐ **Log Files:** Original log files showing the output of your successful run are included.
- ☐ **Environment:** README lists all required external packages or libraries.

C. Reproducibility & Structure

- ☐ **Directory Structure:** The package is organized into three distinct folders:
 1. Raw data (containing original data and data-cleaning program)
 2. Analytical data (containing cleaned data and estimation program)
 3. Results and logs (containing all generated output and execution logs)
- ☐ **Cleanliness:** Package contains only necessary files; temporary or unrelated files are removed.
- ☐ **No Manual Steps:** Results are generated via code without manual intervention.

Part 3: Final Commitment

By signing below, I hereby certify, represent, and warrant the following:

1. **Privacy, Confidentiality, and Legal Compliance**

The replication package and all accompanying materials, including but not limited to data, code, documentation, log files, and screenshots, do not contain any state secrets, confidential commercial information, sensitive personally identifiable information (PII), or content that violates individual privacy, confidentiality obligations, third-party rights, or applicable laws and regulations, unless lawful authorization has been duly obtained or appropriate protective measures (including anonymization or aggregation) have been implemented.

2. **Rights, Copyright, and Permissions**

I represent and warrant that I hold the legal right, copyright, and all necessary licenses and permissions to provide the data, code, and related materials submitted with this manuscript, and to make such materials available publicly in a repository and/or share them privately with the CER Data Editor. This representation includes full compliance with Institutional Review Board (IRB) requirements, Data Use Agreements (DUA), data provider restrictions, and any other applicable contractual or legal obligations.

3. **Provision of Nonrestricted Data and Repository Availability**

I agree to provide all nonrestricted data, code, and documentation necessary to replicate the results reported in the manuscript (the “Replication Package”) and to deposit such materials in a designated public repository in accordance with the Journal’s data and replication policy. I acknowledge that nonrestricted materials must be made available for replication purposes upon publication and remain accessible to the research community.

4. **Restricted Data and Access Disclosure**

If any data used in the analysis are subject to access restrictions and cannot be publicly shared (“Restricted Data”), I certify that such data are lawfully restricted. I further agree to provide clear and detailed documentation in the Readme File describing the nature of the restriction and specifying how, where, and under what conditions qualified researchers may obtain access to the Restricted Data for replication purposes.

5. **Public Disclosure and De-identification**

I acknowledge that sensitive personally identifiable information or restricted micro-data must not be included in any public replication package. All publicly released data have been properly de-identified and processed in accordance with applicable privacy laws, regulations, and data provider protocols.

6. **Accuracy and Assumption of Responsibility**

I certify that the information provided in this form and in the submitted replication materials is accurate and complete to the best of my knowledge. I acknowledge and agree that any legal liability, dispute, or consequence arising from violations of national security requirements, commercial confidentiality, personal privacy, third-party rights, or other legal or contractual obligations resulting from the submitted materials shall be borne solely by me (or the authoring team).
